| Rubric | CIVL 3730 |
| Title of course | Fundamentals of Geotechnics |
| Instructor | Prof. Wang Yu-Hsing (Office: 3572, Phone: 8757, Email: ceyhwang@ust.hk) and |
| Teaching Assistant | Prof. Chow Jun Kang (Email: junkangchow@ust.hk) TBA |
| Prerequisites | CIVL 2120 (Mechanics of Materials) |
| Credit | 3 |

| Course Objectives | This course will enable students to understand geotechnical mechanics and associated soil behavior, including basic engineering geology, characteristics of soils, soil compaction, the principle of effective stress, shear strength of soils, the concept of critical state modeling, permeability, seepage problems, ground settlement and consolidation. |
| Topics | <ol style="list-style-type: none"> 1. Basic engineering geology and rock mechanics (including soil formation and clay minerals) 2. Characteristics of soils (including phase relationships, index properties of soils, and soil classifications) 3. Soil compaction 4. Stresses and strains of soils 5. The principle of effective stress. 6. Shear strength of soils (including field testing). 7. A critical state model to interpret soil behavior. 8. One-dimensional flow of water through soils (permeability). 9. Two-dimensional flow of water through soils (seepage). 10. One-dimensional consolidation settlement of fine-grained soils (consolidation). |
| Computer usage | To be advised by the lecturers |
| Lab Projects | <p>Five lab sessions</p> <p>Lab 1: Atterberg's limits test</p> <p>Lab 2: Compaction test</p> <p>Lab 3: Direct shear test</p> <p>Lab 4: Constant head and falling head permeability test</p> <p>Lab 5: One-dimensional consolidation test; Grain size distribution test (sieve analyses)</p> |
| Class/lab schedule | Two 80-minute lectures (every week); 50-minute tutorial (for ~7 times); five 3-hour lab sessions |
| Contribution to the professional component | 100% Engineering topics |
| Intended Learning Outcomes (ILOs) of this course | <ol style="list-style-type: none"> 1. Able to identify, formulate, and solve problems related to geotechnical engineering. 2. Able to conduct experiments, analyze and interpret results for geotechnical engineering design. 3. Able to apply modern engineering tools effectively and efficiently to perform |

| | <p>geotechnical engineering analysis.</p> <p>4. Have the basic knowledge to carry out technically competent geotechnical engineering-related design.</p> |
| Relationship to the program objective | <p>This course contributes to the (1) through (4) program objectives as follows:</p> <p><i>(1) Provide students with professional skills in the design, construction and management of the civil infrastructure.</i></p> <p>This course provides students with in-depth knowledge of geotechnical engineering.</p> <p><i>(4) Expose students to real world engineering projects as well as cutting edge research to improve their understanding of the profession and technological advancements that can improve current practice</i></p> <p>This course helps students realize the considerations, limitations and challenges related to the current design practice in Geotechnical Engineering.</p> |
| Relationship to program outcome | <p>This course contributes to the (1) through (12) program outcomes as follows:</p> <p><i>(1) Acquire fundamental knowledge in mathematics and science on which civil engineering research and practice are based.</i></p> <p><i>(2) Understand fundamental principles of engineering science relevant to civil engineering disciplines</i></p> <p><i>(5) Develop an ability to identify and formulate civil engineering problems, and propose feasible solutions with an appreciation of their underlying assumptions, uncertainties, constraints, and technical limitations</i></p> <p>Students will learn basic engineering geology and principles of soil mechanics from this course; therefore, students should be able to understand, formulate, and solve problems related to geotechnical engineering.</p> <p><i>(3) Acquire an ability to conduct experiments, analyze and interpret results, and appreciate the importance of experimental data in establishing empirical relationships and parameters for analysis and design</i></p> <p>Students have to attend five different laboratory sessions and submit lab reports for each experiment in this course; therefore, students should be able to conduct experiments, analyze and interpret results for geotechnical engineering design.</p> <p><i>(4) Acquire an ability to apply modern engineering tools and IT tools effectively and efficiently for engineering analysis, design and communication</i></p> <p>Students have to do seven assignments and prepare five laboratory reports in this course; therefore, students should have the ability to apply modern engineering tools and IT tools for geotechnical engineering related analyses.</p> <p><i>(6) Develop technical competency to design civil engineering components and systems, with an understanding of the principles behind the design methodologies.</i></p> <p><i>(8) Obtain in-depth knowledge in at least one major area of specialization within civil engineering</i></p> |

| | <p>This course provides in-depth knowledge of soil mechanics, which helps students understand the principles behind the design methodologies of geotechnical engineering. Therefore, student should be able to develop technical competency for geotechnical engineering related design in the end of the course.</p> | | | | | | | | | | | | | | | |
